

Time	Monday, April 27	Tuesday, April 28	Wednesday, April 29	Thursday, April 30
Fixed slots	Environmental effects / Dynamics	Planetesimals / Planet-disk interaction	Dust / Photoevaporation	Observations / Radiation
8:00	Breakfast			
9:30	Planet Formation Initiated by Infall-Induced Pressure Bumps (Haichen Zhao)	Planetesimal Mass Distribution Simulations with DustPy (Stefan Adelbert)	How grain charging influences dust collisions (<i>Sebastian Stammer</i>)	The Effect of Mild-external Photoevaporation on the Evolution of Protoplanetary Disks (Paola Pinilla)
9:50	Late infall and transitional disks (<i>Kees Dullemond</i>)	Disk structures created by a single migrating planet (Kim Melanie Weiskopf)	Impact of Dust Coagulation on Hydrodynamic Turbulence or Realistic Cooling and Feedback with TriPoD (<i>Thomas Pfeil</i>)	The dust content of protoplanetary disks: an observational perspective (<i>Enrique Macías</i>)
10:10	Fly-by butterfly! Warping protoplanetary disks in inclined stellar fly-bys (<i>Lina Kimmig</i>)	SimPLe planet evolution: composition tracking for gas giants in 1D (<i>Anna Penzlin</i>)	TriPoDPy: a versatile toolbox for fast 1D dust evolution: How do accretion outbursts affect the inner disk composition (<i>Nicolas Kaufmann</i>)	Comparing ALMA gas surveys and disk population synthesis models (Giovanni Rosotti)
10:30	Break			
10:50	TBD (Michael Hammer)	The orbital evolution of planets in low viscosity disks: recent results (<i>Richard Nelson</i>)	Volatile evolution in thermally-self-consistent dust evolution models (Alfie Robinson)	Multi-dust inner rim of magnetized protoplanetary disks (Mario Flock)
11:10	Study of magnetic flux transport using global non-ideal MHD models (Anastasia Tzouvanou)	How 2D are planet–disk interactions? Radiative cooling and suitable prescriptions (<i>Alex Ziampras</i>)	Photoevaporation / migration (<i>Giovanni Picogna</i>)	Multi-fluid dust and radiation hydrodynamics: where different methods agree/disagree (Prakruti Sudarshan)
11:30	Interpretable and Differentiable Models for Extracting Physical Information from Astrophysical Spectral Data (<i>Tommaso Grassi</i>)	Thermal structure of circumplanetary environments and its impact on CO emission (<i>Ondřej Chrenko</i>)	Free slot	Multispecies, non-equilibrium radiation hydrodynamics: Numerical method and test problems (Dhruv Muley)
12:00	Lunch			
Flexible Slots	Cosmochemistry / Radiative transfer	Planet-disk interaction / Dynamics	Disk Winds / Dust / Planets	Observations
14:00	Lecture: Cosmochemistry for dummies (Joanna Drążkowska)	Lecture: Planet-disk interactions in a nutshell (<i>Richard Nelson</i>)	Lecture: Disk winds overview (<i>Giovanni Picogna</i>)	Lecture & Hands-on session: Introduction to interferometric imaging (Sreejita Das + <i>Enrique Macías</i>)
15:00	Hands-on session: RADMC-3D (<i>Kees Dullemond</i>) & pyFLD: simple 3D radiative transfer in python (<i>Alex Ziampras</i>)	Lecture: PLUTO and Analytics: What controls pebble clumping: Streaming instability vs. Kelvin Helmholtz vs. ... / Turbulence, Pebbles and Planetesimals (Hubert Klahr)	Hands-on session: DustPy and DustPyLibe (<i>Sebastian Stammer</i>), TriPoD (<i>Thomas Pfeil</i>) & TriPodPy (<i>Nicolas Kaufmann</i>)	
16:00		Lecture: Introduction on the theory of warped disk evolution (<i>Lina Kimmig</i> + <i>Kees Dullemond</i>)		
16:30	Hands-on parallel sessions: PLUTO-Intro (<i>Anna Penzlin</i>) <u>OR</u> Fargo3D (<i>Ondřej Chrenko</i>)	Hands-on session: PRIZMO / PPV data cubes (<i>Tommaso Grassi</i>)	Hands-on session: Planet formation modelling with TriPoDPy + GENGA (Tommy Lau)	Departure after 16:00
17:00	Free slot for discussions			
18:00	Dinner
